

6 Trowbridge Circle, Shrewsbury MA

Modelled environmental noise & air quality

HOW LOUD IS IT? Modelled daytime road-traffic noise is about 50–51 dB(A) — a calm suburban level (birdsong with a faint, distant highway hum; well below normal conversation). It is one of the quietest spots in town: quieter than ~79% of Shrewsbury homes (town average ~54 dB). It's a cul-de-sac on a low rise, 1–3 km from every state highway; the loudest nearby source is Main Street (~45 dB, 154 m away). Aircraft is negligible.

Comparison (A-weighted Leq, dB)	vs. Trowbridge
Shrewsbury Town Hall / common	48.5 about the same
6 TROWBRIDGE CIRCLE	50.5 — (reference)
17A EK Court (Half Moon Cove)	50.9 about the same
Sherwood Ave (residential)	54.1 +4 (~1.3x louder)
near I-290 (Reservoir St)	60.2 +10 (~2x louder)
lakeside by Rt 9/290	65.3 +15 (~2.8x louder)
fronting MA-140 (Grafton St)	69.5 +19 (~3.7x louder)
fronting Route 9 (Harrington)	71.4 +21 (~4.2x louder)

6 Trowbridge Circle — detail

Air quality vs. EK Court (regional air identical).

Noise at ear height on 1 m LiDAR (red = Main St).

CAN A NOISE FENCE HELP? No, not meaningfully.

A fence/berm buys ≤ 1 dB at the house (≤ 1.6 dB even for a full 3 m perimeter wall) — below the ~ 3 dB needed to notice a change. Reasons (from the LiDAR): (1) the house sits ~ 5 m ABOVE Main Street on a rise, so an elevated listener sees over any fence; (2) noise arrives from all sides — Main St (N), your own cul-de-sac 23 m to the S, and South St (SW); (3) the loud sources are far and at shallow angles. It's already quiet, so there's little to gain. For a calmer patio, use the house's own shadow (seat away from Main St) + a low wall close to the nearest source; expect ~ 1 –2 dB at best.

AIR QUALITY. Generally Good-Moderate (US AQI ~ 45 avg; $\sim 51\%$ Good days). PM2.5 annual mean $\sim 9 \mu\text{g}/\text{m}^3$ — right at the 2024 EPA standard, like most of the Northeast; spikes are summer ozone and wildfire-smoke days. Local traffic adds only $\sim +2.6 \mu\text{g}/\text{m}^3$ NO₂ (you're far from highways); aircraft from Worcester Airport is negligible. Same theme as noise: distance from major roads keeps both low.
